DOG APPROVED HOUSING

Hello & Welcome

If you are operating a doggy day care, you are in charge of your customer's current family member. If you are operating a pet rescue or breeding facility you are raising a future family member for someone. The high standards that today's customers have come to expect of you can be challenging at times. We assure you that it is possible with our offering of innovative and well thought out systems.

- Easy Wash Down Systems
- Climate Control
- Innovative Whelping Solutions
- Feeding & Watering Systems
- Multiple Cabinet Options
- Ventilation & Air Exchange
- Multiple Fencing Options

Another valuable service that our company has to offer is that we give our customers the ability to completely customize their new kennel according to their unique situation. We strive to not only provide a safer and healthier environment for your pets but to save you time as well. Providing you with a kennel of superior quality that will last you for years to come is our goal that we strive for every day.

Creating An Ideal Environment For Your Kennel

A lot of thought and planning goes into building a kennel that will keep your dogs healthy and happy. Think carefully about what it will take to keep the temperature and humidity at an ideal level, as well as lighting, waste and water quality.

Temperature & Humidity

Typically temperatures for adult and young dogs should be kept between 65°F and 70°F. Keep the air temp in the whelping area and nursery between 70°F and 75°F. Surface temps for newborn pups should be at 90°F for the first week, and drop 5° each week until 70°F is reached. The best solution to keep the pups warm without overheating the mother is the use of a heated whelping nest. 55% humidity with a variance of 10% above or below is ideal for newborn pups. Adult and young dogs are best kept at 40% - 60%.

Waste Removal

A well designed kennel will make clean up and dog handling as easy as possible, saving you lots of time and money in the long run. Well thought through waste control will reduce the exposure of your dogs to parasites.

Lighting And Water Quality

Struggles with irregular cycling in your female dogs can often be improved by insuring they have adequate time outdoors, and adjusting your indoor lighting to allow for 14 hours of simulated daylight. Testing the water in your kennel annually is recommended. Take samples for testing from multiple sources; hoses, hose bibs, and faucets and the well, should all be checked to keep your dogs as healthy as possible.

Recommendations by:
Marty Greer, DMV

WELPING OPTIONS

A well thought out whelping room set-up will save you lots of frustration, time and money in the long run.

The whelping room in your kennel is one area where you DO NOT want to price shop! **ROF Sloped bottom Whelping Beds** are the ultimate whelping solutions for your new kennel. The sloped bottom design naturally keeps the puppies more to the center of the bed which is where the heating source is. Available in hot water and electric. Each individual bed is temp. controlled with a user friendly digital thermostat.

EZS Whelping Nest

Kozy Kennel L-P Pilot Heater
Available in: 700 BTU & 1500 BTU

" When we adopt a dog or any pet, we know it is going to end with us having to say goodbye, but we still do it. And we do it for a very good reason:

They bring so much joy and optimism and happiness. They attack every moment of every day with that attitude. "

Bruce Cameron
